Water Jet Basics

Star Aviation has a Bengal Flow International 4x8 CNC Abrasive Water Jet cutting machine. The Water Jet can cut material from .20 to over 8 inches, depending on material type.

The water jet's unmatched precision eliminates the need for secondary machining by conventional means, therefore, saving you time and money.

Water jet cutting was traditionally used for the high-technology aerospace and medical fields, this technology is perfectly suited for any industry that desires precision cutting.

Water Jet cutting produce no heat so there is no thermal distortion, unlike laser, plasma, and oxy-fuel cutters.

Materials we cut on our water jet:

- Composites
- Titanium
- Glass
- Aluminum
- Stainless and hardened steel
- Brass
- Tile
- Porcelain
- Rubber
- Acrylics
- Ceramics
- Stone
- Carpet
